

Empathy Map

Date	03 October 2026
Team ID	SWTID-2026-5999
Project Name	PocketSmart AI — AI-Assisted Goal-Based Budget Planner
Maximum Marks	4 Marks

Primary Persona

Persona: Ananya, 26, early-career professional who frequently plans purchases and small events with a fixed monthly or occasion-based limit.

SAYS	THINKS
“I know my maximum budget, but I don’t know how to divide it.” “I don’t want to compare ten websites for every item.” “Show me alternatives if the first plan is too expensive.”	“If I spend too much on one category, I will have to reduce something important later.” “I want a recommendation, but I still want control over the final purchase.” “The total should be easy to verify.”

PERSONA: ANANYA	
Goal	Complete a home, event or occasion-related plan without crossing a self-imposed spending limit.
Main Need	A clear allocation, understandable recommendations and a record of the final plan.

DOES	FEELS
Opens multiple shopping and service websites. Keeps rough totals in notes or a calculator. Asks friends for suggestions when unsure. Changes items when the running total becomes too high.	Uncertain at the beginning. Overwhelmed when there are many choices. Relieved when the allocation is clear. More confident when the final amount is independently checked.

Design Insight

The user does not need the AI to make every purchase decision. They need the AI to reduce the amount of planning work while keeping the **budget, item list and final calculation visible**.
