

Project Executable Files

Date	03 October 2026
Team ID	SWTID-2026-5999
Project Name	PocketSmart AI — AI-Assisted Goal-Based Budget Planner
Maximum Marks	3 Marks

Submission Checklist

S.No	Item	Status
1	Source code	Included
2	README and setup guide	Included
3	Python dependency files	Included
4	Database implementation	Included
5	.env.example configuration template	Included
6	Test cases and evidence	Included
7	Docker configuration	Included
8	Phase-wise documentation	Included
9	Hosted URL	Not currently hosted
10	Demo video	To be added after recording

Project Structure

```
PocketSmart-AI/  
|-- main.py  
|-- gemini_utils.py  
|-- auth.py  
|-- models.py  
|-- database.py  
|-- config.py  
|-- check_gemini.py  
|-- requirements.txt  
|-- requirements-dev.txt  
|-- .env.example

|-- 5. Project Development Phase/  
|-- 6.Project Testing/  
|-- 7.Project Documentation/  
|-- 8.Project Demonstration/  
`-- README.md
```

Run Instructions

1. Install Python 3.10 or newer.
2. Create a virtual environment.
3. Install dependencies with `pip install -r requirements.txt`.
4. Copy `.env.example` to `.env`.

- 5. Add the Gemini API key to the environment if live AI generation is required.
- 6. Start the server using `uvicorn main:app --reload`.
- 7. Open `http://localhost:8000`.
- 8. Run the test suite with the development requirements installed.

Known Limitations

Limitation	Current Handling
External prices are not guaranteed to be live	The UI clearly treats amounts as estimates
Shopping links open search pages	User confirms the actual product/service and price
SQLite is intended for a small deployment	PostgreSQL is a future production upgrade
Live Gemini latency varies	Offline fallback keeps the application usable when the API is unavailable
